

Greg Solo

Staff Software Engineer | NYC | greg.solo.cv@gmail.com | gregsolo.me | Authorized to work in the US

Summary

Frontend-focused staff engineer with nearly 20 years of owning complex product work from ambiguous problem to production. Most recently led AI UX and offline-first client architecture at Mem. Works AI-natively with coding agents, reviewing all generated code with rigor scaled to its risk. Makes other engineers faster by mentoring them, founding design systems, and authoring technical designs. Goes into the backend when a feature needs it; the client is where he does his best work.

Experience

Staff Software Engineer, Mem | NYC / Remote | Jul 2024 – Present

AI note-taking product. TypeScript, React, MobX, IndexedDB, Claude Code

- Led AI UX and built the client for every AI surface: multiple iterations of Chat, AI search, auto-organization, summaries, and push-to-talk voice widgets. Cut perceived latency of LLM responses by surfacing thinking steps and streaming partial output early.
- Took the AI-powered Chrome extension from scratch to public Web Store release, solving Shadow DOM compatibility across third-party pages. Its AI interaction pattern was reused across all subsequent Chat iterations.
- Owned the offline-first client architecture that keeps notes editable and consistent without a connection: built the local data layer and its correctness guarantees (multi-tab operation-queue locking, connection management across tab suspension, index integrity), plus on-device image persistence with storage budgeting and eviction.
- Uses Claude Code daily to design and build features and pairs it with Datadog's pup CLI to investigate incidents. Regular contributor to the team's shared AGENTS.md / CLAUDE.md.
- Founded the design system, establishing shared interface standards across engineering, and authored the technical designs guiding later implementations.
- Designed and ran activation experiments that redirected roadmap investment toward retention; shipped local search with ranking, a PDF reader, and one-click Apple Notes import.

Staff Software Engineer, Ro | NYC | Nov 2020 – Jun 2024

Regulated health tech. TypeScript, React, Redux

- Architected and led business-critical pharmacy operations initiatives: an overhaul of the internal pharmacy management tool (95% customer satisfaction rating), a drug utilization system, and a safe, streamlined patient-request review system.
- Stabilized the application managing shipment of hundreds of thousands of highly regulated healthcare products through architectural standards, higher test coverage, and technology upgrades.
- Mentored senior and junior engineers across the organization and introduced modular domain-driven frontend design and testing strategies. Recognized with Ro's company-wide "Delivering Results" award (2022).

Lead Software Engineer, Intent | NYC | Sep 2019 – Oct 2020

- Architected and led a team building full-stack enterprise tools that target, bucket, and manage two billion annual users across 16 million configurable permutations, working closely with Product, UX, and internal stakeholders.
- Convinced an engineering department with 13 years of established practices to adopt TypeScript and Clean Architecture.

Earlier Experience | 2006 – 2019

Lead Consultant at Buildit @ Wipro Digital (NYC); Senior Software Engineer at ZS Associates (Evanston, IL); Lead Software Developer and CTO roles at Astrafit, Bluembo, and LAINT (Kyiv), leading teams on full-stack client work, an enterprise front-end library, e-commerce tools, and a published game.

Teaching, Mentorship & Writing

- Built and taught an enterprise training program at Wipro Digital preparing junior developers for client-facing consulting, and ran company-wide advanced frontend courses at ZS Associates.
- Founded coding classes for immigrants in Chicago as a solo entrepreneur (2016–2018).
- Author of "Building a Game with TypeScript," a multi-chapter article series (blog.gregsolo.me).

Skills

TypeScript, React, MobX, Web Platform (HTML, CSS, Canvas, IndexedDB, Shadow DOM), Clean Architecture, system design, TDD, CI/CD, AI UX, LLM streaming interfaces, Claude Code, agent-assisted development, Godot / Unity, C#. Backend when needed: Node.js, Nest.js, REST APIs, PostgreSQL.

Projects

Builds indie games in Godot and Unity, including the detective mystery *Many Crimes of Serenity Falls* (gregsolo.itch.io).

Education

Master's degree, Information Security | National Aviation University, Kyiv, Ukraine | 2011
