

Greg Solo

<https://gregsolo.me> | NYC | Staff Software Engineer | greg.solo.cv@gmail.com

Summary

Highly skilled and experienced software engineer, architect and leader with a strong track record of delivering exceptional software solutions. My cross-functional collaborative approach fosters productive and enjoyable teamwork.

Top Skills

TypeScript, React, Node.js, Web Platform, HTML, CSS, Godot/C#/GDScript, Prompt Eng

Experience

STAFF SOFTWARE ENGINEER, Mem, NYC / Remote — JUL 2024-PRESENT

TypeScript, React, MobX, IndexedDB, ShadowDOM, HTML, CSS

Owned offline-first architecture on the client, a core product requirement ensuring notes remain editable and consistent. Built the local data layer and its correctness guarantees — multi-tab operation queue locking, database connection management across tab suspension, and index integrity — along with a local on-device image persistence, with storage budgeting and a comprehensive eviction strategy.

Delivered a broad set of user-facing capabilities for an AI note-taking product, including local search with filtering and ranking, a PDF reader, one-click Apple Notes import, and onboarding machinery. Designed and ran activation experiments, improving conversion and directing roadmap investment toward measurable retention gains.

Founded the design system underpinning the product, establishing shared interface standards across the engineering team, and authored the technical designs guiding subsequent implementations. Led the Chrome extension from scratch to public Web Store release, resolving component compatibility within Shadow DOM across third-party pages with conflicting event handling and style rules.

STAFF SOFTWARE ENGINEER, RO, NYC — NOV 2020 - JUN 2024

TypeScript, JavaScript, React, Redux, HTML, CSS

Architecting and leading several business-crucial initiatives, including overhauling an internal pharmacy management tool, resulting in scoring 95% customer satisfaction rating
Leading by example, continuously mentoring and supporting senior and junior software engineers across the organization.

Evangelized and implemented best practices for frontend development, including modular domain-driven code design, and efficient testing strategies
Improved the stability and maintainability of the internal application responsible for the management and shipping of hundreds of thousands of highly regulated healthcare products by establishing architectural best practices, rigorously increasing test coverage, and upgrading underlying technical solutions.

LEAD SOFTWARE ENGINEER, VARIOUS COMPANIES, 2006 - OCT 2020

TypeScript, JavaScript, React, Redux, HTML, CSS, Unity3d/C#

Individually developed and led teams in crafting innovative, rich, interactive websites, apps, and games.

Accomplishments

Company-wide award “The ROies” in “Delivering results” category — 2022

Solo-entrepreneur: established coding classes for immigrants in Chicago 2016-2018

Education

Masters degree, 2011

Pet Projects

MANY CRIMES OF SERENITY FALLS, UNITY/C#

Look for clues, interview townsfolk, and deduce conclusions in this retro-style detective mystery puzzle

QUEEN'S TOWERS, UNITY/C#

Tower Defense game where you have to stand tall against hordes of blood-thirsty enemies!
